GENERATORI DI VAPORE

**atmospheric gas burner**

**serie refrattario**

## TS series

The generators in this series have a vaporizing body formed of two water pipes set in parallel levels leading into two concentric cylinders in such a way as to offer a greater surface for heat transfer, both for irradiation and convection, ensuring high efficiency and an excellent steam output. The particular devising of the steam chamber and the super heater (for types from 100 to up) allows a supply of superheated steam, at a high temperature. The burner is an atmospheric model of our construction, (for types TS from 125 to 700), with stainless steel burners, functioning in two stages so as to ensure that the super header is always at maximum efficiency.

Modello Model	Vapore Kg/h Steam	Pressione Pressure Bar	Camino Ø mm Chimney	Altezza mm Height Atmosf.	Altezza mm Height Refrat.	SERIE NORMALE				SERIE UNIBLOC
